

PART II—DC-TO-DC CONVERTERS

LAMBDA'S MIL-ENVIRONMENT MLW SERIES

HIGH DENSITY, HIGH RELIABILITY MILITARIZED DC-TO-DC CONVERTERS

Lambda has introduced many new models to the MLW Series of isolated DC-to-DC converters and filters for military and civilian aerospace applications:

The MLW-1000 single, dual and triple output models up to 60W; the MLWF-600 high power filters to complement the MLW-1000; the MLW-300 single and dual output models up to 120W feature full load operation at 125°C; the MLWF-300 & 704 filters for operation with baseplate temperatures as high as 125°C.

All models in the MLW Series feature inputs centered around 28VDC in compliance with MIL-STD-704D requirements. The use of thick film hybrid technology provides high density, high reliability and superior regulation without external components. Screening to MIL-STD-883 is available for the most rugged applications. The test methods are:

- Pre Cap Internal Visual Inspection: Per method 2017
- Stabilization Bake: 24 hours @ 125°C per method 1008 condition B
- Temperature Cycle: 10 times, -55°C to 125°C per method 1010
- Constant Acceleration: 500g per method 2001
- Gross Leak: Per method 1014
- Fine Leak: Per method 1014, condition A
- Burn-in: 96 hours @ 70°C ambient
- Final electrical test (25°C)
- Final Visual Inspection: Per method 2009

MIL-STD-883 is specifically associated with hybrid circuits. Due to the substrate mounting of the magnetics and MLC capacitors, the MLW's are not homogeneous hybrids. The constant acceleration is therefore limited to 500g's to avoid mounting damage and the burn-in is limited to 70°C ensuring maximum capacitor temperature remains below 120°C. All screened units are hermetically sealed and are guaranteed to have a maximum leakage rate of 1×10^{-3} ATM-cc/Sec. Due to the complex implementation of the screening there is a 25% additional charge per unit. Screened units are designated by the suffix "-ES" on the part number.

Lambda's MLWF filters allow the converters to meet conducted EMI limits per MIL-STD 461B CE03. In addition, these filter modules provide input voltage transient protection as required by MIL-STD 704B thru D. A fast reacting (1 pico second) transient suppressor clamps the input voltage at approximately 47VDC, protecting the converter from damage. MLWF filters also provide reverse voltage protection for the converter.

PART II—DC-TO-DC CONVERTERS

LAMBDA'S MIL-ENVIRONMENT MLW SERIES

DC OUTPUT

Output voltage range shown in tables.

REGULATED VOLTAGE

regulation, line	(low line to high line)
	0.10% on MLWS-605, 815 MLWD-815, 915.
	0.12% on MLWS-812 MLWD-812, 912.
	0.14% on MLWS-1015.
	0.17% on MLWS-1012 MLWD-1015.
	0.20% on MLWS-705, 805, 915 and 5V output of MLWT-952, 955.
	0.21% on MLWD-1012.
	0.25% on MLWS-912.
	0.33% on MLWS-615 MLWD-615.
	0.40% on MLWS-905, 1005; $\pm 12V$ outputs of MLWT-952; $\pm 15V$ outputs of MLWT-955; +5V output of MLWT-1022, 1055.
	0.42% on MLWS-612 MLWD-615.
	1.40% on $\pm 15V$ output of MLWT-1055.
	1.70% on $\pm 12V$ outputs of MLWT-1022.
regulation, load	(50mA preload required on 5V output of all triple output models.)

	0.34% on MLWD-915, 1015.
	0.40% on MLWS-705, 805, 905, 1005; MLWT-952, 955; 5V output of MLWT-1022, 1055.
	0.42% on MLWS-612 MLWD-612, 912, 1012.
	0.60% on MLWS-1003.
	3.00% on $\pm 15V$ outputs of MLWT-1055.
	5.00% on $\pm 12V$ outputs of MLWT-1022.
ripple and noise	(2MHz bandwidth, 25°C, 28VDC Input Voltage.)
	30mV pk-pk on MLWS-1003; $\pm 12V$ outputs of MLWT-952; $\pm 15V$ outputs of MLWT-955.
	50mV pk-pk on MLWS-905, 1005, 1012, 1015; MLWD-1012, 1015.
	60mV pk-pk on MLWS-605, 612, 705, 805, 815; MLWD-612, 615.
	65mV pk-pk on MLWS-912, 915.
	80mV pk-pk on MLWS-805; 5V output of MLWT-952, 955.
	85mV pk-pk on MLWT-1022, 1055.

INPUT VOLTAGE RANGE

MLWT-952, 955: 16VDC to 36VDC. MLWS-705: 16VDC to 40VDC. MLWS-605, 612, 805, 812, 815, MLWD-812, 815: 17VDC to 40VDC. MLWS-912, 915, MLWD-912, 915: 18VDC to 40VDC. MLWS-615, 905, 1003, 1005, 1012, 1015, MLWD-615, 1012, 1015, MLWT-1022, 1055: 19VDC to 40VDC.

SHORT CIRCUIT PROTECTION

Indefinite short circuit protection on all outputs.

INPUT VOLTAGE

28VDC Nominal.

EFFICIENCY

74% minimum on MLWS-605, 1003. 76% minimum on MLWS-615; MLWD-615, 812, 815; MLWT-952, 955. 78% minimum on all other models.

INPUT RIPPLE CURRENT

Measured over a 2MHz bandwidth, with 28VDC input at full load. Maximum 50mA pk-pk reflected input current, on all models.

INPUT VOLTAGE TRANSIENTS

50VDC transient for a maximum duration of 50ms on all models. All models will meet the voltage transient specifications for MIL-STD-704(A-D) and MIL-STD-1275 with appropriate MLWF filter.

INPUT REVERSE VOLTAGE PROTECTION

All models will meet with an appropriate MLWF filter.

OPERATING TEMPERATURE RANGE

-55°C to +85°C (baseplate temperature). Operation to 110°C for MLWS-605. Operation to +130°C for MLWS-605. Operation to +135°C for all other models. Consult derating curves for maximum output power available.

STORAGE TEMPERATURE RANGE

-55°C to +125°C (135°C for MLW-600 Series).

COOLING

All models are conduction cooled and require a suitable heatsink. Consult factory for heatsink information.

OUTPUT VOLTAGE ADJUST

All models have a fixed output voltage, $\pm 1\%$ of nominal value, at an input voltage of 28VDC, full load and 25°C ambient temperature. On MLWS-705 and 805 models, the output voltage can be increased by up to 5% by adding an external resistor, per the chart below, between pins 3 and 4.

Nominal Output Voltage Increase	Ohms (Ω)
+0%	Infinity
+1%	390k
+2%	145k
+3%	63k
+4%	22k
+5%	0k

REMOTE ON/OFF

Active low.

SYNCHRONOUS OPERATION

Available on the following models: MLWS-1005, 1012, 1015 MLWD-1012, 1015 MLWT-1022, 1055. Allows for power supply synchronization with system clock. Consult factory for additional technical data.

EMI

All models will meet MIL-STD-461B, CE03 with an appropriate Lambda MLWF filter.

MOUNTING

PCB mount. Flanges available on most models for additional structural support and thermal transfer.

PHYSICAL DATA

Package Model	Oz. Net	Oz. Ship	Size Inches

MLWS-905, 912, 915	1.9	2.9	1.35 x 2.70 x .500
MLWD-1012, 1015	4.9	5.9	2.45 x 3.20 x .595
MLWT-1022, 1055	4.9	5.9	2.45 x 3.20 x .595
MLWS-1003, 1005, 1012, 1015	4.9	5.9	2.45 x 3.20 x .595

OPTIONS

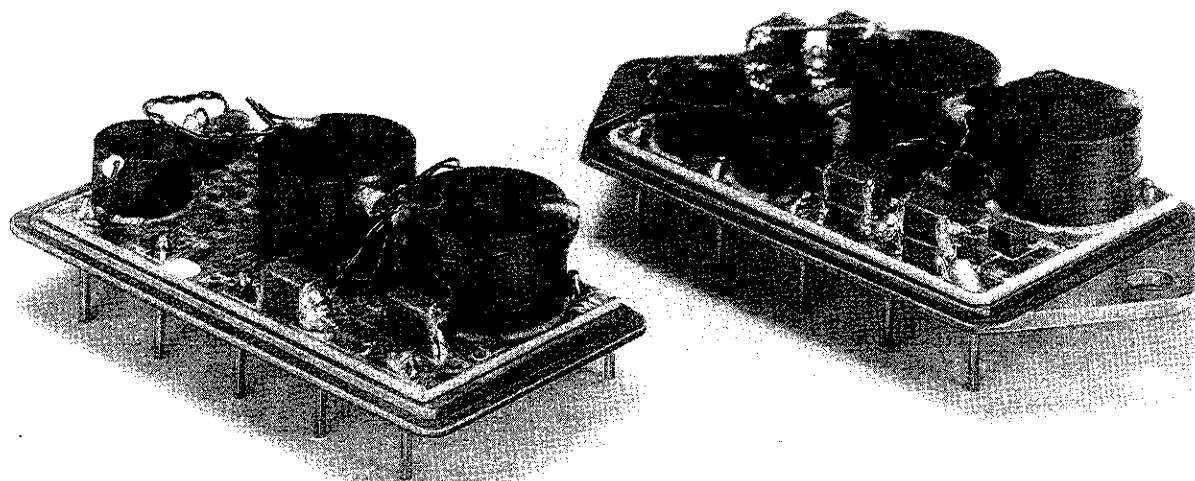

All MLW Series power supplies and MLWF Series filters are available with screening per MIL-STD-883. Consult factory for applicable MIL-STD-883 tests. To order optional screening, add the suffix "ES" to model number and 25% to unit price.

GUARANTEE

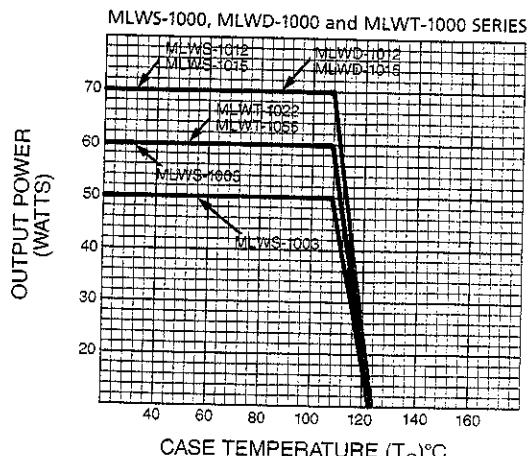

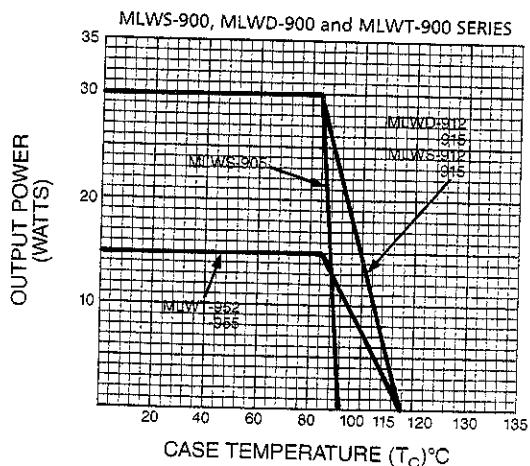

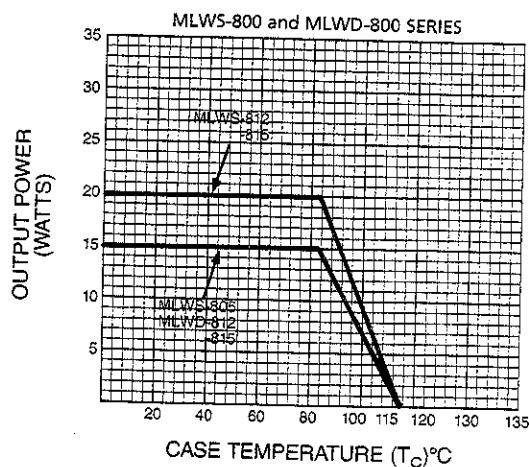

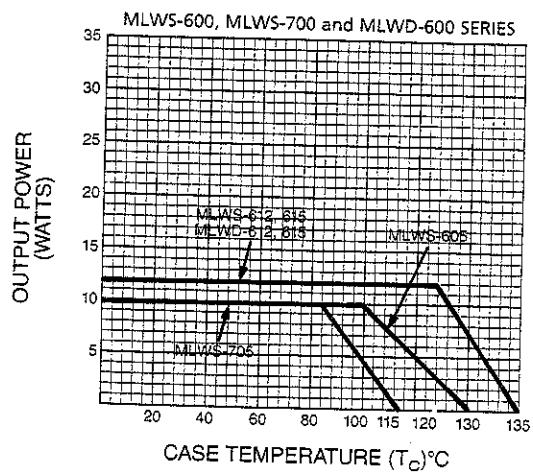

One year guarantee includes labor as well as parts on all MLW Series power supplies and MLWF Series filters.

PART II—DC-TO-DC CONVERTERS

LAMBDA'S MIL-ENVIRONMENT MLW SERIES

DC-To-DC CONVERTER POWER DERATING CURVES*

*When designing these modules into an application, these power derating curves must be adhered to in order to provide reliable operation.

NOTES: 1: Above 85°C Case Temperature. Derate Current and Voltage. Ratings as Follows:
 a) Input Voltage: Derate Linearly to 33 VDC at +125°C Case Temp.
 b) Input Ripple Current: Derate linearly to 270mA on MLWF-200, 400mA on MLWF-400 and 480mA on MLWF-600 at +125°C case temp.
 c) DC Input & Output Current: Derate linearly to 750mA on MLWF-200 and 1.7 Amp on MLWF-400, 600 at +125°C case temp.
 2: Typical Applications. Result in Vout Within 2% of Vin.
 3: Meets MIL-STD-1275A (AT) 3.1.3.1 Surge, and MIL-STD-704A Figs 8 and 9.
 For these standards derate output linearly from 40 W at 105°C to 20 W at 125°C.
 4: Meets MIL-STD-461C 10.2 CS06 limits.
 5: Meets Panavia SP-P-90001, British Standard B53G100, and Civil Aircraft D0160 Standards.
 6: Above 125°C case temperature derate as follows:
 a) Output Ripple Current: Derate linearly to zero at +135°C case temp.
 b) DC Input and Output Current: Derate linearly to zero at 135°C case temp.

MLWF-704

$T_{CASE} = -55^{\circ}\text{C}$ to $+125^{\circ}\text{C}$, $V_{IN} = 28 \text{ VDC}$ unless otherwise specified.

NOTES:

(1) Baseplate temperature of 85°C.

(2) On these models, the output voltage can be increased by adding a resistor between pin 3 and pin 4. Reference specifications for additional information.

(3) On MLWD-900 Series, up to 27W are available from either output, providing that the total package power does not exceed 30W.

(4) On MLWD-1000 Series, up to 66.5W are available from either output, providing that the total package power does not exceed 70W.

(5) On MLWT-1000 Series, up to 50W are available from any single output, providing that the total package power does not exceed 60W.

(6) Minimum preload of 50mA required on 5V output.

NOTES:

- (1) Baseplate temperature of 85°C.
- (2) On these models, the output voltage can be increased by adding a resistor between pin 3 and pin 4. Reference specifications for additional information.
- (3) On MLWD-900 Series, up to 27W are available from either output, providing that the total package power does not exceed 30W.
- (4) On MLWD-1000 Series, up to 66.5W are available from either output, providing that the total package power does not exceed 70W.
- (5) On MLWT-1000 Series, up to 50W are available from any single output, providing that the total package power does not exceed 60W.
- (6) Minimum preload of 50mA required on 5V output.

PART II—DC-TO-DC CONVERTERS

MIL ENVIRONMENT CONVERTER SELECTOR GUIDE

MLWF Series. DC Input Filters. PC Mount.

MAX CURRENT (Amps)	COMPLETE ELEC. SPEC. PG.	COMPLETE MECH. SPEC. PG.	DIFFERENTIAL MODE REJECTION (dB)	DIMENSIONS (inches)	PRICE				MODEL

3.80	99	184	40	1.13 × 2.89 × .495	195	186	179	160	MLWF-400F
5.00	99	184	40	1.13 × 2.89 × .495	220	210	202	180	MLWF-600F
2.50	99	184	50	1.13 × 2.89 × .405	550	524	506	451	MLWF-704

NOTES:

1. MLWF-300 and MLWF-300F have 60dB rejection between 400kHz and 50MHz.

Lambda's MLWF Series of high density, high reliability DC input filters provide transient and reverse voltage protection, and EMI filtering for Lambda's MLW Series DC-to-DC converters. With input voltages centered around 28VDC, the MLW and MLWF Series are ideal for worldwide airborne applications. In addition, the MLWF Series provides key MIL-STD-704 (A-D) transient protection and filtering to simplify overall system design. Simply call your local Lambda sales engineer or our factory to discuss your application.

How To Select An Input EMI Filter

Example: For An MLWS-805

1. DETERMINE INPUT AND OUTPUT PARAMETERS:

Efficiency = 76% Minimum

Minimum Input Voltage = 17 VDC

Output Voltage = 5 VDC

Maximum Load Current = 3.0A

2. CALCULATE INPUT CURRENT

$$I_{\text{INPUT}} = \frac{P_{\text{OUT}}}{\text{Efficiency} \times V_{\text{INPUT}}} = \frac{15\text{W}}{(0.76) \times (17)} = 1.16\text{A}$$

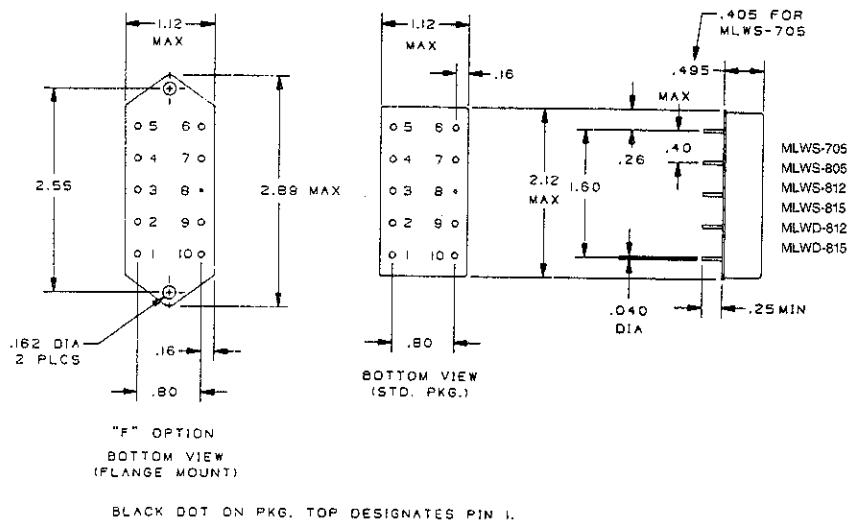

3. Therefore, the MLWF-200 with an input current of 1.75 Amps is suitable for the application.

4. For multiple converter applications add up all input currents to determine which filter must be used.
